

DOSAGE OF SILICON MICRO NUTRIENT

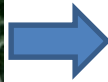

Cereals

1.5 ml per liter – 3 dosage in a gap of 15 days

- Spray after 15-21 days of the crop
- Seeds can be soaked overnight in a same solution for effective growth

Sugar-Cane

1 ml per liter – 3 dosage in a gap of 15 days

- First spray after 1.5 - 2 months of the crop
- Dipping of sugarcane sets in Silicon micro nutrient solution enhances germination ratio, leaf area and plant height during plantation

- Silicon is must for many other crops like cotton, fruits, etc.
 - Silicon can be used with 1-2 ml dose per liter with 3 dosage in a gap of 15 days
- Can also be applied on soil before plantation (2 liter per hectare)
